**FIRST SEMESTER M.Sc. DEGREE (REGULAR/SUPPLEMENTARY)
EXAMINATION, NOVEMBER 2023**

(CBCSS)

Chemistry

CHE 1C 02—ELEMENTARY INORGANIC CHEMISTRY

(2019 Admission onwards)

Time : Three Hours

Maximum : 30 Weightage

Section A*Answer any eight questions.**Each question carries a weightage of 1.*

- Distinguish between Lewis concept and Lux-Flood concept of acids and bases.
- Arrange the following complex species in the increasing order of acid strength and substantiate your answer.
 $[\text{Cr}(\text{H}_2\text{O})_6]^{3+}$, $[\text{Fe}(\text{H}_2\text{O})_6]^{3+}$, $[\text{Co}(\text{H}_2\text{O})_6]^{3+}$ and $[\text{V}(\text{H}_2\text{O})_6]^{3+}$.
- Arrange the different types of hydrogen atoms present in carboranes in the increasing order of acidity. Give reasons for your answer.
- Using Wade's rule, classify the following compounds into *closo*, *nido*, *arachno* and *hypo* boranes :
 a) B_4H_{10} b) $\text{C}_2\text{B}_3\text{H}_5$ c) B_5H_{11} and d) $\text{C}_2\text{B}_3\text{H}_5\text{Fe}(\text{CO})_3$
- How does polythiazyl behave as 'one dimensional metal' ?
- How is triphosphonitrilic chloride converted into phospham ?
- What are super heavy elements ? How are they produced ?
- The ratio between atoms of two radioactive elements A and B at equilibrium was found to be $3.1 \times 10^9 : 1$. If half-life period of A is 2×10^{10} years, what is the half-life period of B ?
- Write a note on stellar energy.
- How do carbon nanotubes differ from fullerenes ?

(8 × 1 = 8 weightage)

Turn over

Section B

Answer any **six** questions.

Each question carries a weightage of 2.

11. What is Symbiosis ? Explain with examples.
12. How is S_4N_4 prepared ? Discuss its structure and properties.
13. Give an account of the classification of silicates.
14. What are Latimer and Frost diagrams ? Discuss their applications.
15. Describe the working principle of a GM counter.
16. Discuss the bottom-up and top-down approaches for the synthesis of nanomaterials.
17. Discuss the principle and applications of XPS.
18. Give an account of the synthesis and structure of $(NPCl_2)_3$.

(6 × 2 = 12 weightage)

Section C

Answer any **two** questions.

Each question carries a weightage of 5.

19. Discuss the HSAB concept of acids and bases. Explain with suitable examples. How this concept predicts the co-ordination of ambidentate ligands.
20. How are B- and N- substituted borazines prepared ? Give an account of the structure and bonding in borazine. Compare its reactivity with that of benzene.
21. Give an account of the heteropoly and isopoly anions of W and Mo.
22. Elaborate the principle and instrumentation of neutron activation analysis. Mention its merits and demerits.

(2 × 5 = 10 weightage)
